**RE: Traffic & Speed Counts in Aqua Vista - UPDATE**

The Aqua Vista HOA has a long history of maintaining good communications with the City. Most recently and in response to the City's proposed Traffic Management & Traffic Safety Program, the Aqua Vista HOA has expressed concerns primarily about safety. In a proactive response to these concerns, City staff have updated a traffic and speed study performed in June 2011 with new data from August 2016.

The data indicates that although there are roughly 8% fewer vehicles using the northern leg of Aqua Vista (30<sup>th</sup> St) now as opposed to five years ago, there is still a significant amount of cut-through traffic (47% in 2011 vs. 44% in 2016). The average speed of these vehicles has remained similar: in 2011 it was 23 MPH and in 2016 it was 24 MPH.

The markings on the map below show the locations of the counts (**2011** and **2016**) and the chart summarizes the average daily traffic and average speed at these locations.

DATE	LOCATION / DIRECTION	AVERAGE DAILY TRAFFIC	AVERAGE SPEED
2011	WB 9316 30th St	491	23
2011	EB 9315 30th St	262	23
<i>Combined:</i>		753	23
2016	WB 9335 30th St	445	26
2016	EB 9335 30th St	250	20
<i>Combined:</i>		695	24
